

## Faculty Review of Open eTextbooks

The [California Open Educational Resources Council](http://www.cool4ed.org) has designed and implemented a faculty review process of the free and open etextbooks showcased within the California Open Online Library for Education ([www.cool4ed.org](http://www.cool4ed.org)). Faculty from the California Community Colleges, the California State University, and the University of California were invited to review the selected free and open etextbooks using a rubric. Faculty received a stipend for their efforts and funding was provided by the State of California, the William and Flora Hewlett Foundation, and the Bill and Melinda Gates Foundation.

Total Points: 10 out of 30

Please provide comments on any aspect of the subject matter of this textbook:

- This Wiki book is exceptionally weak. I strongly recommend that this is never adopted by any instructor in the CSU.
- Logic, like mathematics, must be learned by completing lots and lots of exercises. This book has no exercises.
- The writing is poor. Much of the book is just bullet points that do not offer nearly enough detail.
- The book has no cultural sensitivity whatsoever.
- Exercises in logic are paramount. There are none in this book. There are no discussed examples. The book is entirely inappropriate for any university level course in logic.

Total Points: 10 out of 25

Please provide comments on any aspect of access concerning this textbook.

- Because it is written as a wikipedia-style page, lines of text can be very long, which we know reduces the readability of the book.
- Because it is written for html, many logical symbols and formulas are displayed using graphics that do not scale.
- This really is a terrible candidate for a text at any university.
